

Hello,

My name is Martijn Stavorinus, I am a product designer with a specialization in engineering.

As long as I can remember I liked to make everything easier in my life through little things I could make, build, or come up with. This passion to solve problems in innovative and creative ways has grown in my study-career.

I have done a minor to specialize in engineering, and I have an ambition to create products that work well and make certain things a little easier for the user.

I have participated in ConceptLab as team manager to get more responsibility and learn the most out of this minor as I can.

Currently I am working as an intern at Fluctus Industrial Design & Engineering. A rather small company but very capable. It's located in Groningen where I now work as all round designer. I am really liking the internship and I am developing myself a lot. You can never have too many skills, and that's why I push myself to take every opportunity to learn new stuff at this company!
